

Capability audit canvas

Experiential AI & Ecology · Module 3: multimodal ecosystem sensing · Operating safely, ethically and legally

Name	Institution	Project or study system
------	-------------	-------------------------

1 Mission

What must your system do, and for whom? One sentence. Your system = your sensors, platforms, data and models together.

Where it will operate

Country, protected area, habitat, airspace; people, settlements or Indigenous lands nearby?

2 Capability audit

List the capabilities your system needs, then ask of each: do we need it, and how could it be misused?

Capability <i>e.g. thermal drone imagery, camera-trap video, acoustic recording, eDNA, an ID model, open data release</i>	Need <i>Essential · Useful · Incidental</i>	Who or what is affected <i>Animals, habitats, people, communities, data subjects, your team</i>	Misuse, dual use or harm <i>How could it, or its data, cause harm, in your hands or others'?</i>	Value at stake <i>e.g. privacy, animal welfare, safety, fairness, autonomy</i>	Caution option <i>Limit · Remove · Geofence · Blur · Obscure locations · Restrict release · None</i>

3 Stakeholders

Direct, indirect and non-human: who is affected, who decides, who benefits? Who hasn't been asked?

4 Permissions, rules and risk

Ethics approval needed? ☐ Yes ☐ No ☐ Don't know

Triggers:

- ☐ Animals, incl. disturbance ☐ People or personal data, incl. by accident (faces, voices)
☐ Flying: aviation rules, category, pilot qualification ☐ Land access, research or import permits
☐ Genetic resources or eDNA (Nagoya/ABS) ☐ Indigenous or community lands or data
☐ Sensitive species locations ☐ Export-controlled items ☐ Other: _____

Fieldwork risk assessment: ☐ Not started ☐ Drafted ☐ Approved Top hazard:

Ethics committee or contact:

Next step, and by when:

5 A question to bring

One question for the session: for Justin, Devis or Steve, or for each other.

6 Red team

In the session: swap canvases. Your reviewer adds the worst plausible misuse or harm they can find; you decide what you'd change.

Worst plausible misuse or harm <i>Be specific: "thermal camera at 120 m picks out people in the village by the reserve" beats "privacy"</i>	Found by <i>Reviewer's name</i>	What I would change <i>A caution option from part 2, a new rule, or a reason to accept the risk</i>

☐ I'm happy for other participants to read and red-team this canvas in the session. Fill in parts 1–5 before the session and upload a photo, scan or the .docx. Part 6 happens in the room.
